

bra4jewellery

Dear customers

We are pleased that you have chosen our jewelry bra. You have a Swiss made by hand product with high quality silicone and with closures in real silver (silver plated) acquired. Have fun with it!

Put on

- Clean the skin of creams and body oils.
- Select cup and jewelry and fasten them by bending the S-loop (Fig. 1). Then turn it back.
- Gently remove the protective film from the inside of the bra. Store the protective film.
- Hold the bra cups at the edge and turn them slightly outwards, leaving the adhesive side towards the chest (Fig. 2).
- Now position the cups with the adhesive side on the chest and turn them back when putting on the chest backward.
- The cups can be put on differently depending on the shape of the breast. Try it out (Figures 3 and 4).
- Now close the neckband of the jewelry or the band at the desired length and press the bra cups firmly.
- In case of irritation/redness of the skin, remove the bra immediately because of a silicone allergy.
- Liability claims for allergies or improper use are expressly excluded.

Cleaning and care

- Clean the adhesive side of the bra with mild soap and water to maintain the adhesive effect over the long term.
- Avoid water/soap contact with the jewelry or ribbon to prevent discoloration.
- Air dry the bra with the adhesive side up in its original form.
- Then put the protective foil back on the dry and clean adhesive sides.
- Avoid touching the adhesive sides with clothing, cloths, etc., as lint will reduce the adhesive effect.
